ABOUT THE PROGRAMME

Skills you can show, not just certificates you can collect.

AI Skills Studio is a set of short, practical programmes that teach students and young professionals to use AI tools well: to learn faster, work smarter and build things they can put in front of other people. Every week ends with something you have made, and every programme ends with a project you present.

Who it is for

Students

College and final-year students who want practical skills and portfolio projects that go beyond a degree.

- No technical background needed
- Learn alongside peers in a small cohort
- Finish with a project you can share

Young professionals

People with 0–5 years of experience who want to use AI to do their current job better and take on more.

- Built around real work tasks
- Schedule designed to fit around a job
- Finish with a before-and-after you can show

How it works

1
Intro session
A free session to see how we teach and which track suits you.

2
Join a cohort
Learn live with a small group and a mentor.

3
Build projects
Weekly build labs turn each lesson into something real.

4
Showcase
Present your capstone and take away a portfolio piece.

Programme at a glance

PROGRAMME AT A GLANCE	
Duration	4 weeks per track [duration to be confirmed]
Format	Live online cohort with recorded sessions [format to be confirmed]
Weekly rhythm	Two live sessions, one build lab and guided self-paced practice [hours per week to be confirmed]
Cohort size	Small groups so every learner gets feedback [seat count to be confirmed]
Prerequisites	None. You need a laptop, a stable internet connection and free tool accounts.
Tools	Mainly free tiers of widely used AI and no-code tools. Specific tools may change as the tools themselves change.

TRACK 01 · FOR STUDENTS

AI Foundations

Use AI confidently for study, research and your first portfolio project, and learn when not to trust it.

WEEK	FOCUS	WHAT YOU WILL BUILD
1	**How AI actually works.** What language models can and cannot do, prompting basics, why AI gets things wrong, and responsible use.	Your personal AI study assistant: a tested set of prompts for your own subjects.
2	**AI for research and study.** Summarising, note-making, checking facts and citing sources properly.	A short research brief on a topic you choose, with sources you have verified.
3	**AI for creating.** Writing, presentations, simple visuals and first steps in analysing data with AI.	A portfolio piece such as a short deck, explainer or data story.
4	**Capstone and showcase.** Plan, build and present a project. Portfolio basics and a stronger LinkedIn profile.	Your capstone project, presented to the cohort and mentors.

Capstone project

A self-chosen project that solves a real problem, for example a study toolkit for your course, a small research guide, or a content series. You present it, take feedback and publish it as part of your portfolio.

By the end you will be able to

- Explain in plain language what AI tools do well, and where they fail
- Write clear prompts and check AI answers before relying on them
- Use AI to research, summarise and create, while citing and verifying sources
- Show a finished project and talk about how you built it

Is this track right for you?

A good fit if you

- are a student with little or no AI experience
- want to study and research more effectively
- want a first project for your portfolio

Consider another track if you

- are already working and want AI to help with your job (try AI at Work)
- want to build and launch a website or content (try Digital Skills Studio)

Tools you may use (examples, which may change): AI chat assistants, note-taking and research tools, presentation and design tools.

TRACK 02 · FOR YOUNG PROFESSIONALS

AI at Work

Use AI to do the job you already have faster and better, then automate the repeat work you would rather not do.

WEEK	FOCUS	WHAT YOU WILL BUILD
1	**AI workflows for your role.** Map your weekly tasks, find where AI helps, and learn reusable prompt patterns.	A task map of your own week and a personal prompt library.
2	**Writing, analysis and communication.** Emails, reports, meeting notes and spreadsheet analysis with AI.	Reusable templates for the documents you write most often.
3	**Automate repeat tasks.** A first look at no-code automation, building a simple workflow, and adding quality checks.	A working automation for one repeat task from your job.
4	**Capstone and showcase.** Improve a real work process and measure the change.	A before-and-after case, presented to the cohort and mentors.

Capstone project

Pick one real process from your own work, such as weekly reporting, candidate screening or customer replies. Redesign it with AI, show the time and quality difference, and present the result. No confidential company data should be used.

By the end you will be able to

- Spot which parts of your job AI can help with safely
- Build prompts and templates your whole team could reuse
- Set up a simple automation and add checks so errors are caught
- Explain the value of what you built to a manager or client

Is this track right for you?

A good fit if you

- have 0–5 years of work experience
- spend time on repeat tasks like reports, emails and spreadsheets
- want practical results you can use at work

Consider another track if you

- are a student without regular work tasks (try AI Foundations)
- want to build a public website or content presence (try Digital Skills Studio)

Tools you may use (examples, which may change): AI chat assistants, spreadsheets and documents, and no-code automation tools.

TRACK 03 · FOR STUDENTS AND PROFESSIONALS

Digital Skills Studio

Build, publish and promote something online using AI-assisted, no-code tools. No programming background needed.

WEEK	FOCUS	WHAT YOU WILL BUILD
1	**Build a simple website.** Structure a page, write the content and build it with AI-assisted tools.	A live one-page website about you, a project or a small idea.
2	**Create content.** Social posts, simple graphic design and a consistent look and feel.	A small brand kit and a first set of posts.
3	**Forms and basic automations.** Collect enquiries into a spreadsheet and send automatic replies.	A working enquiry form that records responses and sends a confirmation.
4	**Launch and showcase.** Publish, share, gather feedback and iterate.	A launched mini-project, presented to the cohort and mentors.

Capstone project

Launch a small online presence for a real or imagined idea: a website, a content plan and a lead form that works. You present what you built and what you would improve next.

By the end you will be able to

- Publish a simple, good-looking website without writing code
- Create consistent, on-brand content using templates and AI help
- Capture enquiries into a spreadsheet and respond automatically
- Iterate on a live project using real feedback

Is this track right for you?

A good fit if you

- want to build and launch something online
- learn best by doing
- do not want to write code

Consider another track if you

- want to focus on study and research skills (try AI Foundations)
- want to improve tasks in your current job (try AI at Work)

Tools you may use (examples, which may change): AI-assisted site builders, Canva, spreadsheets and forms, and free hosting.

PRACTICAL DETAILS

Dates, fees and what to bring.

COHORTS AND FEES	
Free intro session	Free, with no obligation to enrol. Meet the team and ask questions.
Next cohort start	[start date to be confirmed]
Application deadline	[date to be confirmed]
Programme fee	[fee per track to be confirmed]
Student pricing	[to be confirmed]
Payment options	[to be confirmed]
Certificate	[completion recognition to be confirmed]

Frequently asked questions

Do I need to know how to code?
No. Every track is designed for beginners and uses no-code or AI-assisted tools.

How much time will I need each week?
Plan for the two live sessions, the build lab and some practice time. The exact weekly hours will be confirmed with each cohort.

What do I need to take part?
A laptop, a stable internet connection and free accounts for the tools we use. We will share the list before the first session.

What if I miss a session?
Sessions are recorded [to be confirmed] so you can catch up, and mentors can answer questions in the cohort group.

Which track should I choose?
That is what the free intro session is for. Tell us your goals and we will recommend the best fit.

Ready to start?

Book your **free intro session**. We will help you pick the right track and tell you about the next cohort.
